## YOUR VIDEO ORCHESTRATION MADE EASY

Bring to life all elements of your video delivery workflow with the VUALTO CONTROL HUB (VCH). Manage, orchestrate, reach, analyse and profit from your content, with a solution that's perfect for your business and audiences alike.

The VUALTO CONTROL HUB is currently in use by several Broadcasters and Content Owners to manage all aspects of the video streaming workflow. Developed out of deep understanding for content owners needs and following extensive work experience on bespoke projects, the VUALTO CONTROL HUB brings integration with the encoders, streaming servers, workflow rules and DRM into a single set of APIs and GUI.

The VUALTO CONTROL HUB can be hosted in the cloud or on-premise or operated on a SaaS model. The architecture is modular, allowing further integrations with other third parties such as encoders and streaming servers. Currently, the VUALTO CONTROL HUB is integrated with Media Excel encoders and the Unified Streaming Platform. The VUALTO CONTROL HUB integrates with VULIVE, VUREPLAY, VUOD, VUDRM and VUPLAY to provide full control of all aspects of your video delivery.
