

VUOD

MAKING YOUR VOD CONTENT REACH FURTHER

With VUOD from VUALTO, you can deliver your VOD content library securely and across all devices. Using the latest streaming servers, we can provide an automated workflow with full integration into your existing systems. Hosted in your Cloud or fully managed by VUALTO, we ensure consistent and scalable delivery to your global audiences.

VUALTO

VUOD FEATURES

> FLEXIBLE WORKFLOW

Enables customised VOD workflows to be configured exactly to your requirements, using our simple API to control ingest, encryption and delivery.

> JUST-IN-TIME

Deliver pre-processed VOD files or encrypt and transmux just-in-time, using latest streaming servers such as Unified Streaming to provide HLS, HDS, MSS and MPEG-DASH.

> SCALABLE

Able to cope with large volumes of VOD titles, our ingest and packaging process uses a fully scalable and resilient task engine. Our caching mechanisms protect the Origin from unnecessary CDN requests.

> INGEST MANAGEMENT

We provide an Admin GUI and Workflow API to allow ingest management, fault monitoring and webhooks to client systems during the ingest and packaging process.

> DRM INTEGRATION

Encrypt at source or encrypt just-in-time using VUODM to apply Widevine, PlayReady, FairPlay Streaming, Primestime, AES or call out to your existing DRM provider.

> THIRD PARTY INTEGRATION

We can integrate with your own CMS or APIs or alternatively, we have ready made integrations with your chosen commercial media management applications.

> PLAYER SUPPORT

Deliver VUOD with our VUPLAY player integration solutions, including web players and SDKs for iOS/tvOS and Android.

> FULLY MANAGED

Can be delivered on a fully managed basis in VUALTO's Cloud Infrastructure or developed for you to manage in your own infrastructure.

VUOD BENEFITS

- Provides the ability to set up a custom VOD delivery workflow in a short time scale.
- Integrates with VUODM and other DRM providers to ensure secure content delivery.
- Allows VOD content to be played online or offline across multiple devices.
- Our infrastructure and architecture knowledge ensures a robust, scalable and optimum delivery.
- Provides close communication with client systems to receive packaging instructions and send call backs, ensuring smooth integration with your chosen software.
- Professional services completely customised to fit your exact requirements.
- We can provide ongoing 2nd and 3rd line support for your technical teams, with health checks and monitoring of your streaming servers, including Origin, CDN and DRM.
- We have an in house NOC team who work 24/7 alongside our Developers, to monitor the VUALTO CONTROL HUB platform and its encompassing products. This enables us to tackle any potential issues as they happen, ensuring stable, consistent and high quality streaming for your viewers.
